

The Veterans Statistical Informational System should remain stable as it evolves to provide continuously improving support for the collection of veteran data for the VA and DOD agencies. Stability is required for both currently participating entities, as well as new entities that join, bringing new types of data. To the greatest extent possible, the system should easily and automatically collect and normalize disparate data, resulting in standardized quality data - despite the introduction of new data sources. VA and DOD Business Owners require quality and consistent data.
